Machine Learning Scientist

Mumbai – Maharashtra, India

Attention to:

I would like to introduce myself for your consideration for the machine learning engineer opportunity. I am a student with post-graduation diploma in AI who is looking for Artificial Intelligence experience. I believe determination, dedication, discipline along with a zeal to complete the assigned work on time will make me an asset to the company.

I have completed two internships. My first internship was at Fractal analytics where I worked with data scientists to create deep learning models for diagnosing tuberculosis and to assist radiologists with a mission to make healthcare affordable and accessible. It was here that I realized I had a lot to learn in programming and joined the next internship to improve my programming skills in Python and JavaScript.

Currently, I am studying Artificial Intelligence at Durham College. I have created many projects including the start-up success prediction which helps to predict the success rate of the start-up companies based on various parameters like location, funding, type of business, etc. and Text-AI which predicts the next word for enabling users to type faster and make less errors. These projects developed my knowledge in Flask, Python, GitHub, and Web Development. I have proficiency in Pandas, Numpy, scikit-learn libraries of Python along with statistics and mathematics.

It would be a pleasure to make myself available for an interview to detail my professional background. I can be contacted via cell phone or email. Thank you for your time and consideration.

Sincerely,

Shrita Gaonkar
