My Data Science journey

2019

Bachelor's in Computer Science

- Data Science section in the last semester of the B.CS curriculum.
- Learned ML algorithms like Linear Regression, KNN
- This was fascinating to me and I decided to go further down this road.

2019

Exploring

- Chose to intern at some of the companies focused on ML and Python to further explore the area.
- It's here that I have really gained experience with ML.
- Skills at this point: Python(Pandas, Numpy), Machine Learning (Theoretical Knowledge)

2020

A real step towards a career in AI

- I was firmly committed to building my AI career.
- I decided to learn in-depth expertise and work on specialised topics.
- Later, I decided to seek an AI Diploma from Durham College in Canada
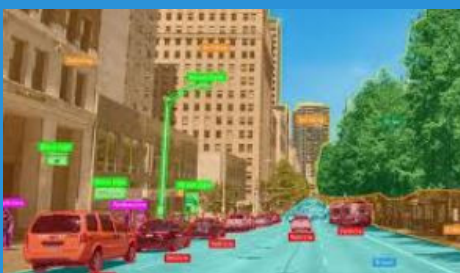

2020

Diploma in AI

- This was a wonderful experience.
- In order to solve real life problems, I learned everything there is to know about fundamental Machine Learning models and their implementation.
- Instead of modelling more emphasis was given on data analysis to understand the patterns between the features in the dataset

2021

To-be

- The start of a new semester.
- I look forward to learn more advanced subjects such as Deep Learning, Computer Vision, Natural Language Processing and Python Frameworks.

2021-22

- I will be open to many possibilities in this field after graduating from Durham College.
- I plan to complete a master's degree in data science at Ryerson University.
